PROJECTS

- **Library Management System**

- Developed a backend-driven library management system with role-based authentication (Admin/User).
- Designed and implemented RESTful APIs for managing books, users, and issue/return workflows.
- Implemented MySQL relational database design to handle users, books, and transaction relationships.
- Added due date tracking and fine calculation logic for issued books.
- Used Git for version control and Postman for API testing and validation.

Tech: Node.js, Express.js, MySQL

- **Car Rental Service**

- Built a full-stack car rental application with secure user authentication and booking management
- Implemented date-based availability checks to prevent overlapping and double bookings.
- Developed REST APIs and integrated them with a responsive frontend.
- Designed business logic for booking, cancellation, and admin car management.
- Maintained clean, modular backend structure for easier debugging and scalability.

Tech: Node.js, Express.js, MySQL
